**Course Format**

**Faculty Web Page and MYSJSU Messaging**

Course materials such as syllabus, handouts, notes, assignment instructions, etc. can be found on my faculty web page at <http://www.cs.sjsu.edu/~austin/cs168-spring22> and Canvas (<http://sjsu.instructure.com/>). You are responsible for regularly checking with the messaging system through Canvas to learn of any updates.

**Course Description**

Cryptocurrencies and the blockchain. Centralized clearinghouse solutions vs. distributed consensus solutions. The blockchain and its validation approaches: proof-of-work, proof-of-stake, proof-of-storage, etc. Cryptocurrency wallets. Smart contracts.

## Course Learning Outcomes (CLO)

The goal of this course is to equip students to be blockchain engineers. After completion of this course, the student is expected to be versed in the various subjects of interest in cryptocurrencies and comfortable with the technologies needed.

Upon successful completion of this course, students will be able to:

1. Build a cryptocurrency with a central clearinghouse.
2. Build a cryptocurrency with distributed consensus.
3. Design and implement a proof-of-work blockchain.
4. Design and implement a proof-of-stake blockchain.
5. Use mnemonics to save and reconstruct a cryptocurrency wallet.
6. Apply the blockchain outside of a cryptocurrency setting.

## Required Texts/Readings

### Textbook

[Mastering Bitcoin: Unlocking Digital Cryptocurrencies](#), Andreas M. Antonopoulos, (O'Reilly, December 2014, ISBN-13: 978-1449374044, ISBN-10: 1449374042)

### Other Readings

- [Bitcoin: A Peer-to-Peer Electronic Cash System](#), Satoshi Nakamoto.
- [Bitcoin and Cryptocurrency Technologies](#) (PRE-PUBLICATION VERSION), Arvind Narayanan, Joseph Bonneau, Edward Felten, Andrew Miller, Steven Goldfeder, 19-Feb-2016.
- [SoK: Research Perspectives and Challenges for Bitcoin and Cryptocurrencies](#), Bonneau et al., IEEE 2015.
- Other readings TBD.

## Course Requirements and Assignments

SJSU classes are designed such that in order to be successful, it is expected that students will spend a minimum of forty-five hours for each unit of credit (normally three hours per unit per week), including preparing for class, participating in course activities, completing assignments, and so on. More details about student workload can be found in [University Policy S12-3](#) at <http://www.sjsu.edu/senate/docs/S12-3.pdf>.

Homework assignments are in JavaScript using Node.js. There will also be a group project involving teams of 1-4 students. In this project, students will design their own blockchain-based cryptocurrency borrowing concepts from other cryptocurrencies.

There is a final and a midterm.

In-class labs are used as the basis for your participation grade. Any question in the lab is fair game for the exams.

See [Canvas](#) at <http://sjsu.instructure.com/> for more details.

## Final Examination or Evaluation

The final exam is worth 20% of the total grade for the class. It is a written exam. Paper will be provided. Bring something to write with.

## Grading Information

### Determination of Grades

2. 20% -- Class project (team)
3. 20% -- Midterm
