DECEMBER 6, 2024 6:00 P.M. TO 9:30 P.M. PROCTOR: AZIZ

INSTRUCTIONS:

- 1. Answer ONLY the specified number of questions from the options provided in each section. Do not answer more than the required number of questions. Each section takes one hour.
- 2. Your answers must be on the paper provided. No more than one answer per page. Do not answer two questions on the same sheet of paper.
- 3. If you use more than one sheet of paper for a question, write "Page 1 of 2" and "Page 2 of 2."
- 4. Write ONLY on one side of each sheet. Use only pen. Answers in pencil will be disqualified.
- 5. Write ----- at the end of each answer.
- 6. Write your exam identification number in the upper right-hand corner of each sheet of paper.
- 7. Write the question number in the upper right-hand corner of each sheet of paper.

Section 3: Econometrics—Answer One Question.

3A. (Econ 203A) Consider the following linear and log-log models for the demand for cigarettes:

Variable Name Definition

| price | Price of a pack of cigarettes | |
|--------|---|--|
| lprice | Log value for the price of a pack of cigarettes | |
| packs | Thousands of packs of cigarettes sold | |
| lquant | Log value for packs | |

DEPARTMENT OF ECONOMICS SAN JOSE STATE UNIVERSITY MASTER'S COMPREHENSIVE EXAMINATION

DECEMBER 6, 2024 6:00 P.M. TO 9:30 P.M. PROCTOR: AZIZ

OLS Regression

| | Dependent | variable: |
|---|---|--|
| | packs (1) | lquant (2) |
| price | -0.62214*** (0.11513) | |
| lprice | | -1.21306*** (0.21645) |
| Constant | 210.33420*** (22.30273) | 10.33892*** (1.03529) |
| Observations R2 Adjusted R2 Residual Std. Error F Statistic | 48 0.39581 0.38268 18.68556 30.13535*** | 48 0.40575 0.39283 0.18962 31.40859*** |
| Note: | *p<0.1; **p<0 | 0.05; ***p<0.01 |

- a. For the linear functional form (i.e., column 1), interpret the impact of a \$1 increase in the price on cigarette consumption—be specific about the units.
- b. For the log-log model, interpret the impact of a 1% decrease in the price on cigarette consumption.
- c. Suppose the above regressions are homoscedastic. Define homoscedastic and name the test we would use to determine this.
- d. Under specific conditions, OLS is BLUE. What does the acronym BLUE stand for, and what does it tell us about OLS as an estimator?
- e. Suppose you add income as an additional X variable to your regression. However, you are afraid income and price provide similar information when determining the quantity. How would you determine the joint statistical significance of the coefficients on income and price?
