What role does technology play in shaping who we are—and who we're becoming?
In *PHIL 110: Science, Technology, and Human Values*, we explore how science and technology are far more than tools—they're expressions of culture, imagination, power, and moral vision. This exciting, discussion-driven course dives into hot-button topics like AI, predictive policing, human enhancement, and climate engineering while also stepping back to ask deeper philosophical questions: What is technology? Who decides how it's used? And how do our values—ethical, aesthetic, and political—shape and get shaped by it? From Silicon Valley innovation to global controversies, we'll unpack how science and technology are changing our world, our relationships, and even our understanding of what it means to be human. If you're curious about the moral and cultural forces behind today's most pressing science and tech debates, this course is for you.

Fulfills SJSU Studies area V (upper-division GE area 3)
